

Report v5 — what the platform is for, and what every page is for

SR 11-7 starts every review with the **model inventory**: list everything in use, state what each is for, and retire what cannot justify itself. Applied here to every screen. Evidence came from the code (which data each screen reads, research/surface-inventory.py), the live site, and usage logs. Prepared September 24, 2026.

1. The platform's exact purpose

Quant Edge finds today's highest-evidence trades, shows why and how to take them, and proves whether they worked.

Every surface must serve one of four jobs. A surface that serves none, or serves one another surface already serves better, is merged or retired.

Job	The question it answers	Where it lives now
1. FIND	What should I look at today?	NEXUS board (ranked book) · Slate (daily digest + pre-market movers) · Radar (chart patterns) · LEAPS (long-dated) · CRYPTO
2. UNDERSTAND	Why this, and what is the market doing?	Ticker workup (quick look) · Research (options, GEX, flow lab) · CHART · FLOW · GEX · CATALYST · board market context
3. ACT	How would I take it, and at what size?	Contract picker + levels in the workup · BOT (paper execution)
4. PROVE	Did it work?	JOURNAL: Trade log · Track record · Backtest · POSITIONS · Alerts

2. Inventory and decisions

Surface	Job	Sources	Unique	Lines	Decision	Note
NEXUS board	FIND	31	17	11,352	Keep	Consolidated (section 3)
CHART	UNDERSTAND	8	1	1,151	Keep	
FLOW	UNDERSTAND	6	5	2,351	Keep	the only home for the print tape now
GEX	UNDERSTAND	7	3	2,601	Keep	
LEAPS	FIND	1	0	974	Keep	only long-dated surface
CRYPTO	FIND	5	1	1,136	Keep	
CATALYST	UNDERSTAND	3	2	377	Keep	
BOT	ACT	12	2	2,053	Keep	absorbed Automations
POSITIONS	PROVE	1	1	672	Keep	
JOURNAL	PROVE	43	10	12,018	Keep	absorbed Performance; AI-chat History retired
Slate	FIND	3	3	346	Keep	absorbed Trade Desk's pre-market movers
Radar	FIND	4	4	707	Keep	
Performance	PROVE	33	0	8,371	Merged	same component as JOURNAL > Track record
Alerts	PROVE	2	1	740	Keep	
How-to	—	0	0	189	Keep	guide
Settings	—	5	2	1,411	Keep	
Research	UNDERSTAND	16	10	5,368	Keep	options & flow lab; workup = quick look
Ticker workup	UNDERSTAND	19	11	1,775	Keep	decision dossier
Trade Desk (page)	FIND	—	—	deleted	Retired	showed '0 ideas' beside a full board -> /slate
Automations (page)	ACT	—	—	deleted	Retired	duplicate BOT, \$0.00 P&L; -> BOT tab
Journal > History	—	—	—	—	Retired	chats from a chatbot that no longer exists

'Data sources' counts the API endpoints a screen's code reads; 'unique' counts those no other screen reads. Zero unique means the screen shows nothing the platform doesn't already show elsewhere. Strongest duplicate found: JOURNAL ~ Performance share 33 sources (Jaccard 0.77) — the Journal tab rendered the Performance page itself.

3. The NEXUS board — why it felt like 'a lot going on'

It was the heaviest screen by far: 41 files, 11,352 lines, 31 data sources, 14 panels and 4 views of the same list. Several panels showed the same thing: sector rotation appeared four ways, flow prints duplicated the FLOW tab, and a status block duplicated the footer.

Panel	Job	Duplicates	Decision
Active Book (ranked ideas)	FIND	—	Keep
Candidate field (pre-trigger)	FIND	—	Keep
Market pulse (futures, crypto)	UNDERSTAND	partly the ticker tape	Keep
Rotation map + cash rotation	UNDERSTAND	—	Keep
Session brief (leading groups + names)	UNDERSTAND	names inside groups — unique	Keep

Panel	Job	Duplicates	Decision
Pattern radar (count)	FIND	Radar page (it is the door to it)	Keep
Watchlist	FIND	—	Keep
Sector heatmap	UNDERSTAND	Rotation map	Hidden by default
Flow prints	UNDERSTAND	FLOW tab	Hidden by default
System status block	—	Footer bar on every tab	Removed

Hidden panels stay one tap away (the restore chip at the top of the rail) — nothing was taken from anyone who relied on it. Section 01 is now 'Market context', and on phones the book shows its top 6 ideas first, so market context sits 3,613 px down instead of 9,520 px.

4. Items left open in v4 — now closed

Open item (v4)	What was done	Result
Active Book ~9,400px on a phone	Top 6 + 'Show all N ideas' on phones	Fixed
27% of sentences in monospace	Remaining monospace lines are data ('entry \$1,811.12'), which should align; the one real description rewritten as a sentence	Fixed
44% of text uppercase	Short labels only (tabs, eyebrows); every sentence is sentence case	Keep
No per-tab usage data	Page views now record ?tab and ?jtab — the next review can use real usage	Fixed
Heap capped at 280 MB (512 MB era)	Raised to 1 GB on the 2 GB droplet — less garbage-collection CPU	Fixed
Data screens LCP 3-15s under scanner load	Heap fix + earlier caching; a true fix needs a 2nd vCPU or moving scanners off the web process	Open

5. Monitoring from here (SR 11-7 ongoing monitoring)

Re-run monthly: research/surface-inventory.py (does every screen still earn its place), research/nav-architecture.py (0 dead / 0 stale / 0 unreachable), research/ui-scorecard.js on iPhone and iPad, and the page-view query by tab. A screen with no views for 30 days and no unique data is the next retirement candidate.
